

Boat Ramp Pontoons greatly assist in the safety and efficiency of trailer boat launching and retrieving at various tides. Boat ramp pontoons also make it possible to launch and retrieve most trailer boats single handed without holding up other users.

MDS Marine can design and manufacture a Boat Ramp Pontoon to suit most existing or new boat ramps.

Boat Ramp Pontoons consist of heavy duty aluminium frames with high impact resistant, rotationally moulded polyethylene flotation modules.

Pontoons are available in a number of decking options to suit customer budgets, and aesthetic requirements.

A unique flexible coupling is used between pontoon sections to allow for articulation of the pontoon down the boat ramp at varying tides.

For safe and convenient launching, consider an MDS Marine boat ramp pontoon on your next project.

Custom made to suit your boat ramp

Safer & more convenient Trailer Boat Launching

Greater efficiency at high demand facilities
