

At MDS Marine we have made it our business to create aluminium and timber products that reflect the pride and craftsmanship that go into each of our handcrafted systems.

Each structure is designed specifically to suit each particular installation. We give our customers not only a sound and serviceable product, but also a product that is pleasing to the eye and complimentary to the beautiful coastal properties of our present and future clients. Our products are individually diverse and designed to fit every budget. MDS Marine will design and build a custom product to your specifications.

Our specialty is the design and manufacture of aluminium ramps and gangways. From small domestic ramps to large commercial gangways and pedestrian bridges. MDS Marine has you covered!

Aluminium frames are fully welded marine grade, structural extrusions. Aluminium frames exhibit excellent corrosion resistance and strength and are most suited to saltwater marine environments.

Long span trussed aluminium pedestrian Bridges are proving to be a cost effective alternative to heavy steel structures with intermediate piers.

Decking options include timber, plastic timber composites and timber imitations, fibre reinforced plastic sheeting, Aquadeck bondboard, plastic decking tiles, aluminium expanded mesh and aluminium grating.

All products conform to the applicable Australian Standards.
